

Sevlo Technologies

CAPABILITIES STATEMENT

Sevlo Technologies LLC is a premier information technology services firm delivering secure, reliable, and scalable solutions to government and commercial clients. Established in 2022 and headquartered in California, we specialize in optimizing complex IT environments, protecting critical systems, and ensuring operational continuity through expert-level infrastructure management, proactive technical support, and advanced cybersecurity operations.

Our mission is to empower organizations with technology that is not only powerful and efficient but fundamentally secure. From enterprise network architecture and cloud infrastructure to cybersecurity operations and custom software development, Sevlo Technologies delivers end-to-end IT solutions backed by senior-level engineering oversight and industry-leading certifications. We serve federal, state, and local government agencies as well as commercial enterprises across diverse sectors.

Who We Are

Sevlo Technologies LLC is a minority-owned, small business IT services firm built on the conviction that every organization — regardless of size or sector — deserves enterprise-grade technology, rigorous cybersecurity, and responsive technical support. Since our founding in 2022, we have grown from a boutique consultancy into a full-spectrum IT partner, serving government agencies, educational institutions, and commercial enterprises across the United States.

What sets Sevlo apart is our senior-led delivery model. Every engagement is overseen directly by certified engineers and architects with hands-on expertise in the platforms we deploy. We do not subcontract core technical work or rely on junior staff to manage critical infrastructure. Our clients receive direct access to the professionals responsible for designing, securing, and maintaining their environments — ensuring accountability, quality, and continuity from project kickoff through long-term operations.

Our Promise

We deliver technology solutions that are secure by design, scalable by architecture, and accountable by principle. Every project is owned end-to-end by Sevlo senior engineers — no handoffs, no gaps, no excuses.

- Senior-led project delivery on every engagement
- Security-first architecture in all solutions
- Rapid response and measurable outcomes
- Full transparency and direct accountability

- Small Business (SB)
- Small Business – Public Works (SB-PW)

Core Philosophy

Technology should enable mission success — not create risk. We build environments that are resilient, compliant, and ready for whatever comes next.

Cybersecurity Services

CORE SERVICE AREA

Sevlo Technologies delivers comprehensive cybersecurity services designed to protect organizations from evolving threats, satisfy regulatory requirements, and maintain operational resilience. Our security practice is built on a defense-in-depth philosophy, layering network segmentation, endpoint protection, identity management, and continuous monitoring to create environments that are resilient against both external attacks and insider threats. Our engineers hold advanced certifications including CISSP, CISM, and Security+, ensuring that every security decision is grounded in recognized best practices and real-world operational experience.

Our cybersecurity engagements span the full lifecycle of risk management — from initial vulnerability assessment and threat modeling through architecture hardening, policy development, and ongoing security operations. We work with organizations to establish security baselines aligned with NIST frameworks, CIS benchmarks, and sector-specific compliance requirements, then maintain those standards through proactive monitoring and rapid incident response. Whether your organization is preparing for a federal audit, responding to an active breach, or building a security program from the ground up, Sevlo provides the expertise and operational discipline to meet the challenge.

Firewall & NGFW Management

Enterprise-grade firewall deployment, policy auditing, and ongoing management using Palo Alto Prisma NGFW and leading next-generation platforms. We audit hundreds of policies to eliminate shadow rules, reduce attack surface, and improve throughput.

Vulnerability Assessment

Systematic identification and remediation of vulnerabilities across networks, endpoints, and applications. Our assessments align with NIST and CIS benchmarks and include prioritized remediation roadmaps tailored to your risk tolerance.

Security Operations & Monitoring

24/7 security monitoring, SIEM integration, log management, and incident response. We establish baselines, detect anomalies, and respond to threats before they escalate into breaches or compliance violations.

Compliance & Governance

Support for NIST 800-53, NIST 800-171, CMMC, HIPAA, and other regulatory frameworks. We help organizations document controls, prepare for audits, and maintain continuous compliance posture.

Our cybersecurity practice is not a bolt-on service — it is embedded into every engagement we undertake. Whether we are deploying a new network, migrating to the cloud, or developing custom software, security considerations are integrated from the first design session through final deployment and beyond.

Enterprise Networking & Infrastructure

CORE SERVICE AREA

Sevlo Technologies designs, deploys, and manages enterprise network infrastructures that are fast, reliable, and built to scale. Our networking practice encompasses everything from initial site surveys and architecture design through hardware procurement, configuration, deployment, and ongoing management. We work with leading platforms including Extreme Networks, Cisco, and Palo Alto to deliver solutions that meet the performance and security requirements of demanding government and commercial environments.

Our approach to infrastructure optimization goes beyond simple hardware refreshes. We conduct thorough assessments of existing environments to identify bottlenecks, single points of failure, and inefficiencies — then develop modernization roadmaps that deliver measurable improvements in throughput, uptime, and operational cost. Recent engagements have included complete network redesigns for multi-site commercial offices, WAN optimization for distributed government facilities, and wireless infrastructure overhauls for high-density environments such as university campuses and public service buildings.

Networking Capabilities

- Enterprise LAN/WAN design and deployment
- Wireless infrastructure (Wi-Fi 6/6E) planning and installation
- SD-WAN implementation and management
- Network segmentation and micro-segmentation
- QoS design for voice, video, and data convergence
- Multi-site connectivity and branch office networking
- Network performance monitoring and optimization
- Extreme Networks and Cisco platform expertise

Infrastructure Optimization

- Hardware and software stack consolidation
- Server refresh and lifecycle management
- Storage architecture design (SAN/NAS)
- Backup, disaster recovery, and business continuity
- Data center design and migration
- Cable plant assessment and structured cabling
- Power and cooling optimization
- Environmental monitoring and alerting

20%

Throughput Gain

Achieved through Palo Alto Prisma NGFW migration and policy optimization for a commercial client in 2025.

30%

Hardware Reduction

Reduced physical server footprint through VMware vSphere 8.0 consolidation and vSAN deployment.

500+

Policies Audited

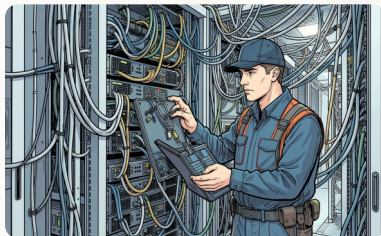

Firewall policies reviewed, rationalized, and hardened during a single NGFW migration engagement.

Site Management & IT Operations

CORE SERVICE AREA

Sevlo Technologies provides comprehensive IT site management services that keep your facilities running smoothly, securely, and efficiently. Our site management practice covers the full spectrum of on-site and remote IT operations — from help desk support and end-user computing to server room management, vendor coordination, and facility-level technology planning. We serve as the single point of accountability for all technology operations at your location, freeing your leadership to focus on mission delivery rather than IT troubleshooting.

Our site management teams are trained to operate in both government and commercial environments, understanding the unique compliance, security, and operational requirements of each. We maintain detailed documentation, asset inventories, and change management records to ensure full transparency and audit readiness. Our proactive maintenance schedules, patch management programs, and performance monitoring prevent issues before they impact users — and our rapid response protocols ensure that when problems do occur, they are resolved quickly and with minimal disruption.

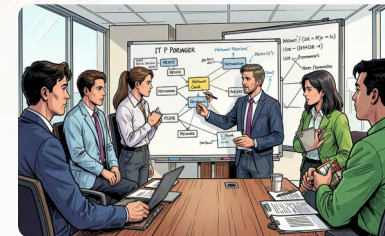

Server Room & Data Center Management

Full oversight of server rooms, data closets, and data center facilities including rack management, environmental monitoring, power management, and hardware lifecycle tracking. We maintain optimal operating conditions and ensure rapid hardware replacement when needed.

Help Desk & End User Support

Tier 1 through Tier 3 technical support for all end-user computing needs including workstation setup, software installation, peripheral configuration, account management, and remote access support. We maintain SLA-backed response times and resolution targets.

Vendor & Project Coordination

Centralized management of all technology vendors, contractors, and service providers at your facility. We coordinate installations, maintenance visits, and upgrades to minimize disruption and ensure work meets specification and quality standards.

Sevlo's site management services are scalable to organizations of all sizes — from single-office small businesses to multi-facility government agencies. We tailor our service delivery model to match your operational tempo, security requirements, and budget, ensuring that you receive the right level of support without paying for services you do not need.

Software Development & Automation

CORE SERVICE AREA

Sevlo Technologies offers custom software development and intelligent process automation services designed to eliminate manual workflows, reduce operational costs, and accelerate business processes. Our development team builds secure, maintainable, and scalable applications tailored to the specific needs of government and commercial clients. We work across the full software development lifecycle — from requirements gathering and architecture design through development, testing, deployment, and ongoing maintenance — ensuring that every solution we deliver is production-ready and built to last.

Our automation practice leverages platforms such as Workato, Microsoft Power Automate, and custom API integrations to connect disparate systems and eliminate redundant data entry. Recent engagements have included CRM-to-ERP synchronization workflows that eliminated over 15 hours of manual data entry per week, automated report generation pipelines that reduced analyst workload by 40%, and custom integration layers that unified legacy systems with modern cloud platforms. We measure the success of every automation project in terms of time saved, errors eliminated, and capacity freed for higher-value work.

1 Custom Application Development Full-stack web and mobile application development using modern frameworks and secure coding practices. We build applications that integrate with your existing systems, comply with accessibility standards, and scale to meet growing demand. Our development process includes thorough requirements analysis, iterative design reviews, and comprehensive testing before any deployment.	2 API Integration & Middleware Design and implementation of RESTful APIs, webhooks, and middleware solutions that connect your systems seamlessly. We specialize in integrating legacy on-premises applications with modern cloud platforms, enabling data flow across your entire technology ecosystem without costly rip-and-replace projects.
3 Business Process Automation End-to-end workflow automation using Workato, Power Automate, and custom scripting. We analyze your existing processes, identify automation opportunities, and deploy solutions that reduce manual effort, eliminate errors, and accelerate throughput — with measurable ROI from day one.	4 DevSecOps & CI/CD Pipelines Secure software delivery pipelines that integrate security scanning, automated testing, and continuous deployment. We help organizations adopt DevSecOps practices that accelerate release cycles while maintaining rigorous security and compliance standards throughout the development lifecycle.

Virtualization & Cloud Infrastructure

CORE SERVICE AREA

Sevlo Technologies delivers expert virtualization and cloud infrastructure services that help organizations modernize their data centers, reduce hardware costs, and improve operational agility. Our virtualization practice is built on deep expertise in VMware vSphere, vSAN, NSX, and Horizon, as well as Microsoft Hyper-V and Azure Stack. We design virtualization architectures that maximize resource utilization, simplify management, and provide the foundation for cloud migration and hybrid infrastructure strategies.

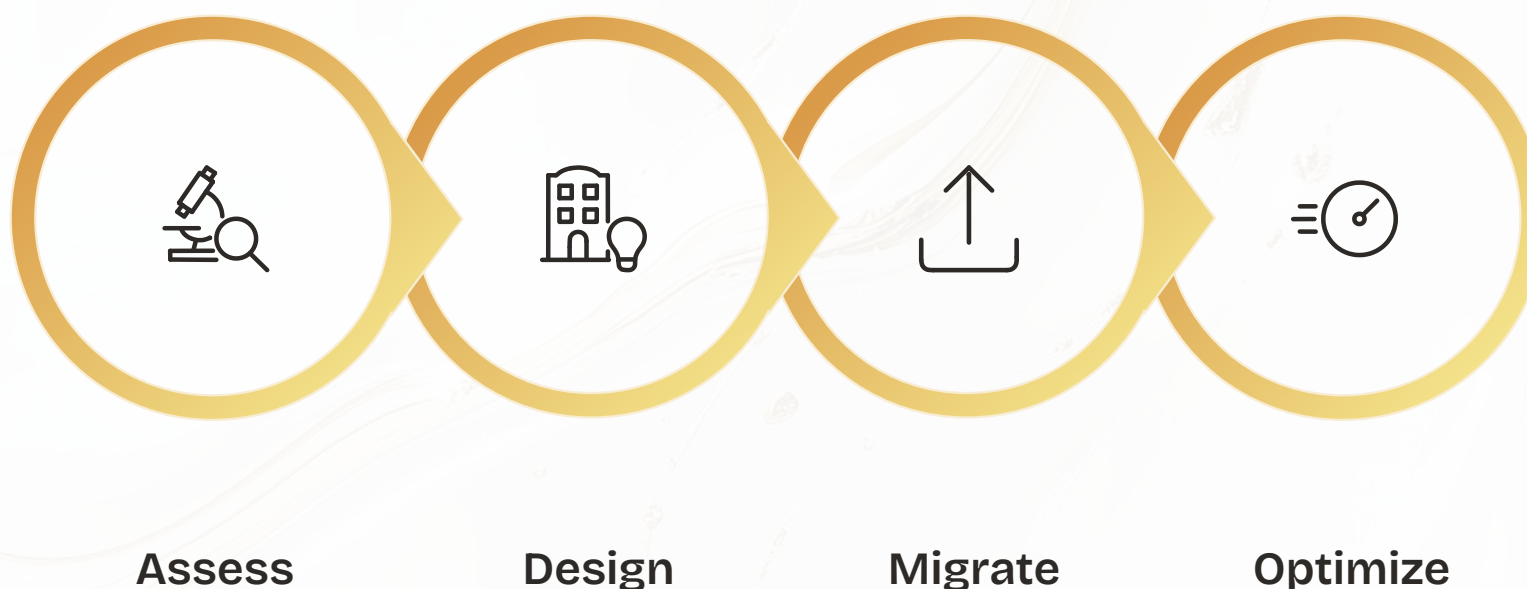

Our cloud services span infrastructure migration, cloud architecture design, and ongoing cloud operations management across AWS, Microsoft Azure, and hybrid environments. We help organizations assess their current workloads, determine the optimal cloud deployment model, and execute migrations with minimal disruption. Our cloud architects hold AWS and Azure certifications and bring hands-on experience with large-scale migrations in both government and commercial settings. We design cloud environments that are secure, cost-optimized, and aligned with your organization's compliance and governance requirements.

Virtualization Services

- VMware vSphere design, deployment, and management
- vSAN storage architecture and optimization
- VMware NSX network virtualization and micro-segmentation
- Horizon VDI deployment and management
- Hyper-V and Azure Stack integration
- Virtual machine lifecycle management
- Cluster design for high availability and fault tolerance
- Disaster recovery and backup integration

Cloud Services

- AWS infrastructure design and migration
- Microsoft Azure architecture and management
- Hybrid cloud design and implementation
- Cloud cost optimization and rightsizing
- Identity and access management (IAM)
- Cloud security posture management
- Multi-cloud governance and policy enforcement
- Cloud-native application modernization

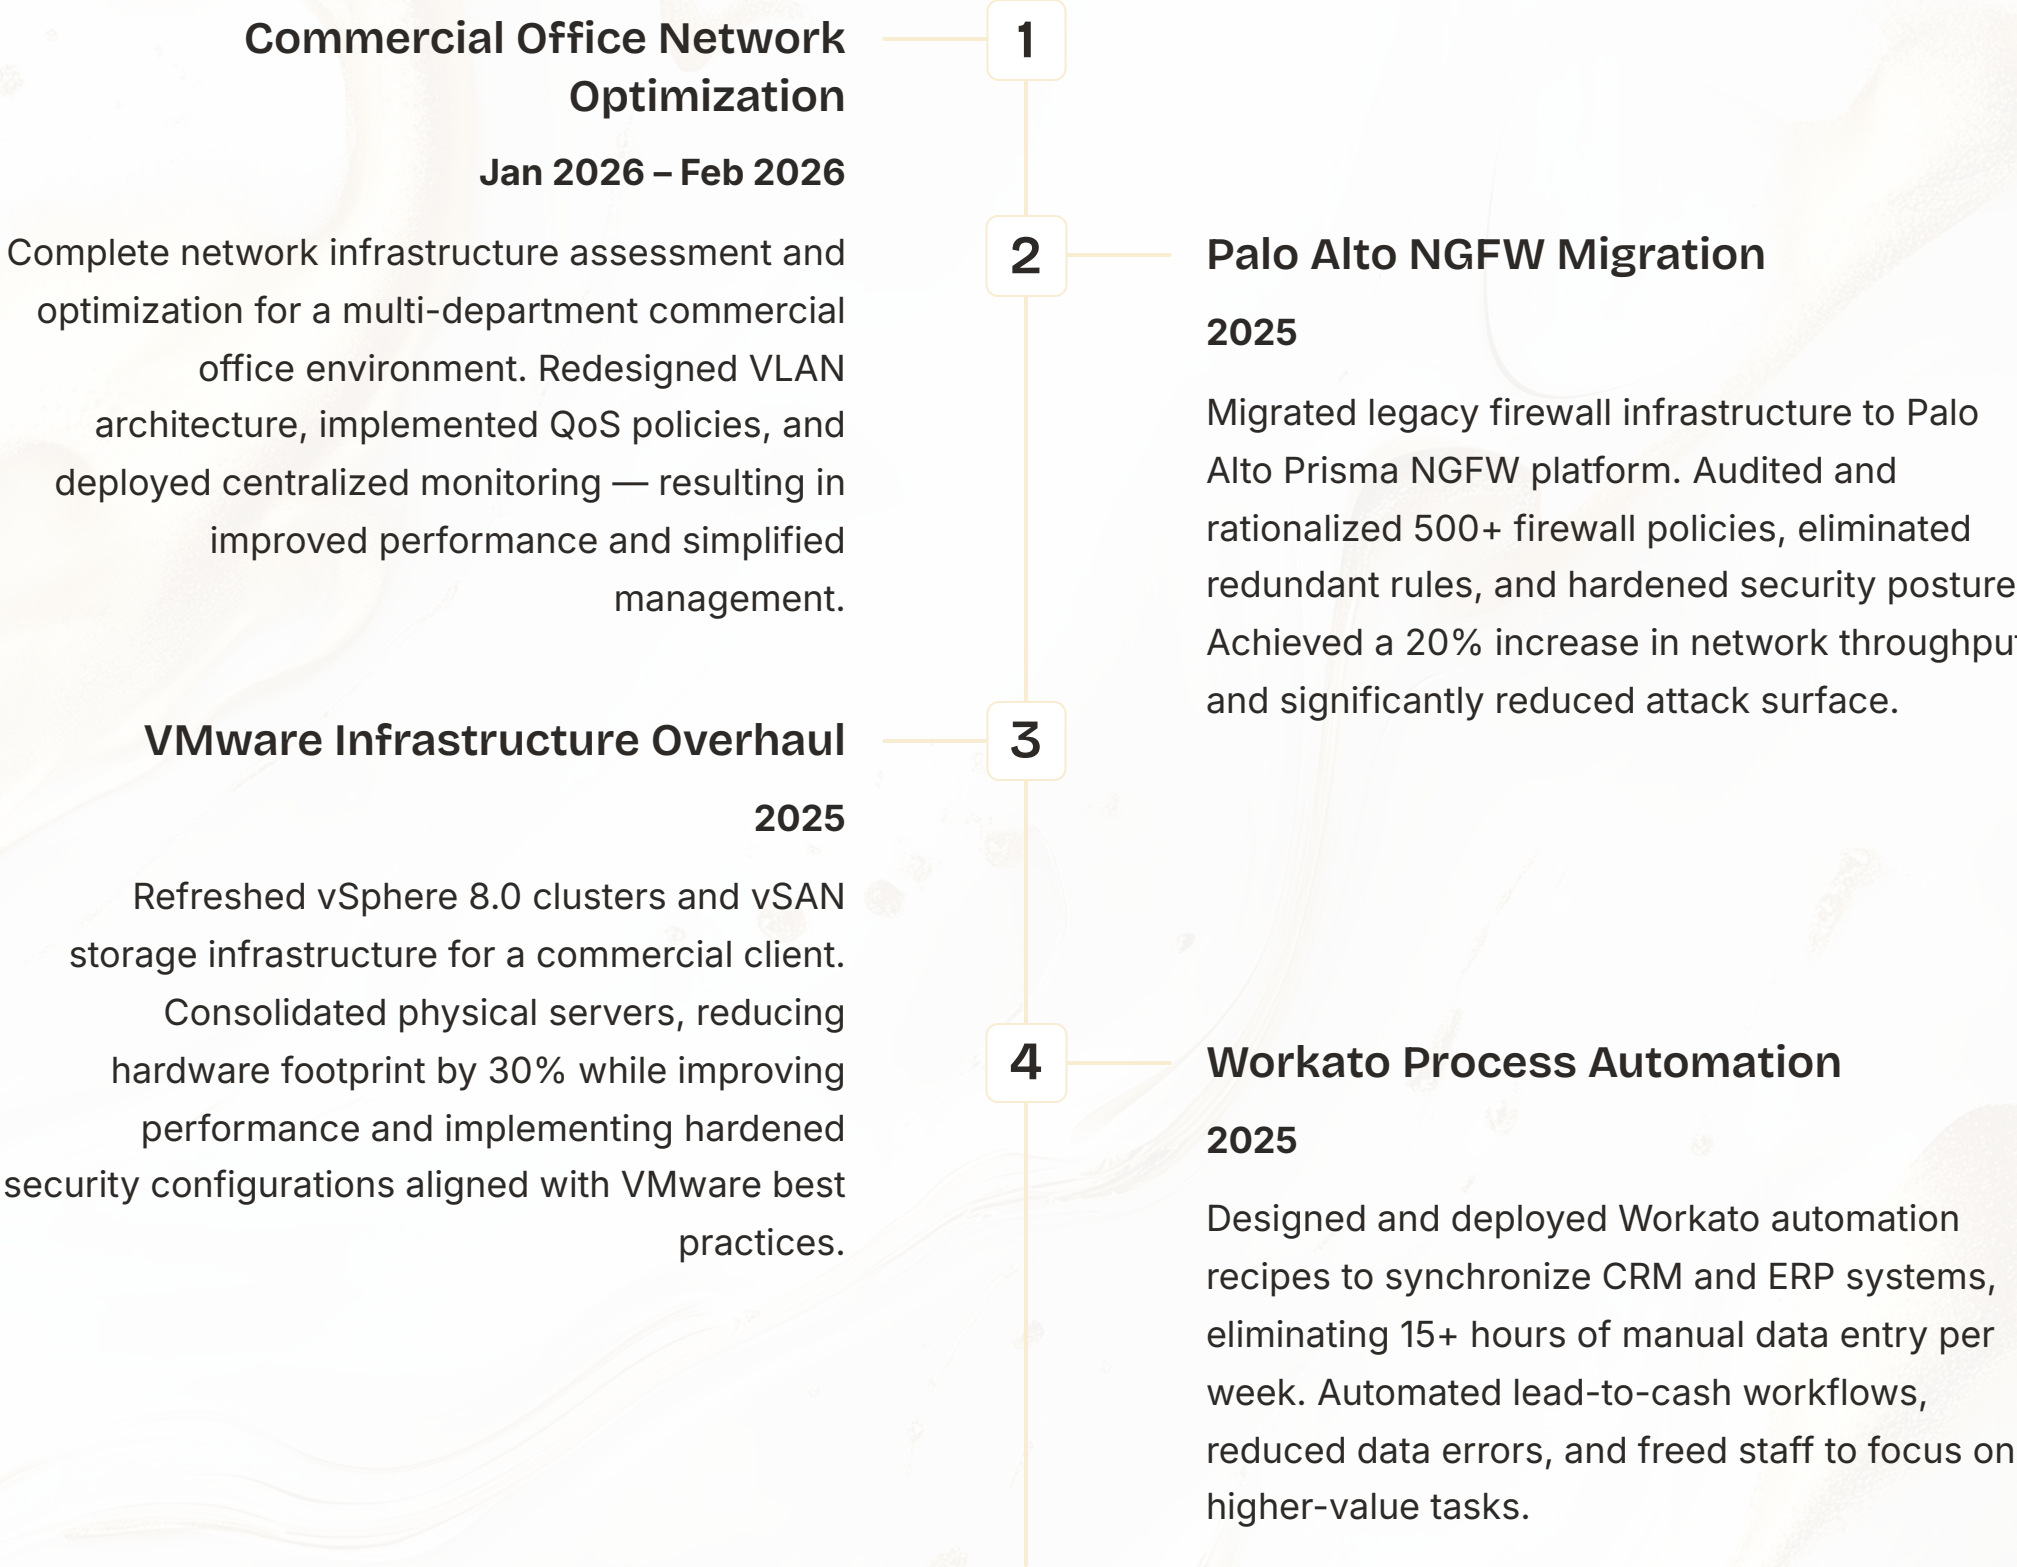

Our four-phase engagement model ensures that every virtualization or cloud project is thoroughly planned, securely executed, and continuously optimized. We do not migrate workloads without a comprehensive assessment and a detailed migration plan — every step is designed to minimize risk and maximize the value our clients receive from their infrastructure investments.

Proven Experience

RECENT ENGAGEMENTS

Sevlo Technologies has a track record of delivering measurable results across a diverse range of IT engagements. Our recent project portfolio demonstrates our ability to execute complex technical work on time, within scope, and with direct senior oversight. Each engagement listed below represents a real-world challenge that we solved with a combination of technical expertise, disciplined project management, and a security-first mindset. These projects span network security modernization, infrastructure consolidation, and business process automation — reflecting the full breadth of our capabilities.

Company Snapshot & Qualifications

Sevlo Technologies LLC is a fully qualified government contractor with all required registrations, certifications, and business classifications to compete for and perform on federal, state, and local contracts. Our qualifications reflect our commitment to professional excellence, regulatory compliance, and continuous investment in our team's technical capabilities. Below is a comprehensive overview of our company identifiers, NAICS classifications, and professional certifications.

Company Identifiers

Established: 2022

CAGE Code: 8HYX4

UEI: H59RGW3T6BA5

Headquarters: California, USA

Business Classifications

- Minority Business Enterprise (MBE)
- Disadvantaged Business Enterprise (DBE)
- Small Business (SB)
- Small Business – Public Works (SB-PW)

NAICS Classifications

NAICS Code	Description	Designation

541513	Computer Facilities Management Services	Secondary
541519	Other Computer Related Services	Secondary
541511	Custom Computer Programming Services	Secondary

Professional Certifications

Our team holds industry-leading certifications that demonstrate expertise across cybersecurity, cloud platforms, and project management:

AWS	Azure
CISSP	CISM
PMP	Security+

Key Clients & Contact

Sevlo Technologies is proud to serve a diverse portfolio of government agencies, educational institutions, and commercial organizations. Our clients trust us with their most critical IT infrastructure, cybersecurity operations, and technology modernization initiatives. We maintain long-term partnerships built on consistent delivery, transparent communication, and measurable results.

Trusted By

Get In Touch

We welcome inquiries from government agencies, prime contractors, and commercial organizations seeking a reliable, certified, and security-focused IT partner. Whether you have an active procurement requirement, a upcoming project, or simply want to learn more about how Sevlo Technologies can support your mission — we are ready to talk.

Why Partner With Sevlo?

- **Senior-Led Delivery** — Every engagement is owned and executed by certified senior engineers, not junior subcontractors.
- **Security-First Mindset** — Cybersecurity is embedded into every solution we design and deploy — not added as an afterthought.
- **Proven Track Record** — Demonstrated success across government and commercial sectors with measurable outcomes.
- **Small Business Agility** — Fast decision-making, flexible engagement models, and direct access to leadership.

 Sevlo Technologies LLC is registered in SAM.gov and holds all required certifications to perform on federal, state, and local government contracts. CAGE: 8HYX4 | UEI: H59RGW3T6BA5 | NAICS Primary: 541512
